WILLIAM GARCIA

ROBLOX CREATOR & TECHNICAL SUPPORT | DEVELOPER ENGAGEMENT | SOFTWARE & BAS DEVELOPMENT

Temple, TX | 714-770-1785 | williamgarciacontrols@gmail.com

PROFESSIONAL SUMMARY

Technical specialist, active Roblox creator, and developer of BASVerify, a building automation commissioning and diagnostics toolkit in beta development. Hands-on experience with Roblox Studio, Luau, client/server architecture, RemoteEvents, multiplayer testing, UI logic, Python, BACnet networking, and AI-assisted software workflows. Brings 10+ years of customer-facing technical troubleshooting, escalation ownership, documentation, training, and cross-functional coordination in building automation and electrical systems. Skilled at translating field problems into testable requirements, isolating issues, validating fixes, and communicating technical findings clearly.

CORE QUALIFICATIONS

Roblox / Creator	Roblox Studio • Luau • Publishing • Creator workflows • Multiplayer testing
Technical Support	Troubleshooting • Escalation ownership • Fault isolation • Follow-up
Communication	Customer support • Technical documentation • Training • Coordination
Roblox Systems	Client/server architecture • RemoteEvents • UI • Round states • Output debugging
BAS / Commissioning	BACnet/IP • BACnet MS/TP • Modbus TCP/RTU • Sequence validation • Testing
Software Development	Python • VS Code • Command line • Requirements • Iterative debugging
Product / Workflows	BASVerify beta • Evidence-based reporting • Deficiency tracking design • AI-assisted development

ROBLOX DEVELOPMENT & CREATOR EXPERIENCE

Independent Roblox Developer / Creator | 2026 - Present

- Design, develop, test, and publish Roblox experiences with Roblox Studio and Luau, including client/server systems, RemoteEvents, player states, UI behavior, spawning, round logic, and multiplayer testing.
- Developing **Blackthorn Estate**, a multiplayer social-deduction survival experience, through structured phases spanning role systems, combat, meetings and voting, objectives, presentation, UI, audio, and reliability testing.
- Developed and published **Steal a Tablet**; worked with experience configuration, game passes, monetization, advertising, player acquisition, engagement metrics, updates, and creator platform workflows.
- Reproduce bugs, inspect Studio Output logs, isolate faults, validate fixes in server/client sessions, and document test outcomes. Review and adapt AI-assisted code rather than treating generated output as finished.

SOFTWARE & BUILDING AUTOMATION DEVELOPMENT

BASVerify | Independent Beta Project | 2026 - Present

- Designing a Python-based BAS commissioning and diagnostics toolkit to translate real-world field workflows into structured device discovery, equipment monitoring, test execution, and documentation capabilities.
- Defining BACnet/IP connectivity and configurable controller/network settings; planning expansion for BACnet MS/TP, USB-to-RS-485 serial adapters, and Modbus integrations as hardware and protocol support are validated.
- Developing requirements for functional performance tests, trend-based analysis, abnormal-condition identification, deficiency tracking, and timestamped, evidence-based commissioning reports.
- Applying iterative software development, UI workflow planning, command-line troubleshooting, technical documentation, and AI-assisted implementation and debugging; beta features remain under development and are not represented as field-validated.

PROFESSIONAL EXPERIENCE

Senior BAS Specialist - Trane Technologies | Fort Worth, TX | Mar 2022 - Sep 2026

- Owned complex technical issues through diagnosis, escalation, resolution, validation, and customer follow-up across healthcare, education, commercial, banking, and industrial environments.
- Coordinated with customers, engineers, project managers, commissioning agents, subcontractors, and facility teams; documented testing, sequence validation, system changes, training, and turnover.
- Programmed, commissioned, integrated, and troubleshot Tracer SC/SC+, Tracer TU, Synchrony, Niagara N4, UC600, Symbio 500/210, BACnet MS/TP, BACnet/IP, Modbus TCP/RTU, and networked automation systems.

Project Manager / Lead Technician - Division 15 Tech | Sacramento, CA | Jan 2020 - Mar 2022

- Managed BAS and electrical projects through installation, commissioning, maintenance, documentation, and customer handoff; supervised field teams and resolved technical issues.

Superintendent / Foreman - Stronghold Engineering | Riverside, CA | Mar 2017 - Jan 2020

- Led electrical/BAS installation crews, coordinated field execution, conducted quality inspections, and resolved installation and electrical-system issues.

ADDITIONAL TECHNICAL DEVELOPMENT

- Built a Python-based BACnet discovery/scanning tool with VS Code, command-line tooling, and BACnet libraries to strengthen protocol-level troubleshooting skills.
- Developed AI-assisted workflows for technical reporting, troubleshooting, documentation, and process improvement; completed Skillsoft prompt-engineering and applied ChatGPT training.
- Completed Smart Buildings Academy training and studied AWS Solutions Architect Associate topics including architecture, networking, storage, security, and cloud services.

EDUCATION

Electrical Engineering - Long Beach City College, Long Beach, CA | 2011 - 2014
